Preface

In natal astrology there are many tools to predict the future. I think one of the most important tools, for two reasons, is the progressed lunar phases.

One reason for this is that if we had a time window of more than a year, then if we had not had this tool, we would have to study more than one solar return. But with this tool we would only have a secondary progressed lunar phase of about 3.5 years, every eighth part from new moon to next new moon. You should still investigate whether one can divide each single moon phase once again on eight, in order to be able to examine shorter time span.

The second reason, if we have determined the year, but want to know the month, we would have to study 12 lunar returns.

However, with the tertiary progressed lunar Phase, which is valid for about 3.5 months, we could have only studied 3-4 tertiary progressed lunar Phase and then studied 3 lunar returns for the month.

Progressed moon phases show in their validity period in which areas of life changes, beginnings or ends occur. Not only sun and moon in moon phases but also the other planets and planetary axes are very important with which natal planets and planetary axes create planetary pictures. Also particular importance is the natal sun / moon midpoint during this progressed lunar phase.

Here I will investigate the deaths, the marriage and the divorces. We have to focus our attention, depending on the event, on relevant planetary axes/pictures. Here I write again, although I have written relevant planetary pictures for these events in my works.

Death : ♂ / ♄

Marriage : ♀ / ♁

Divorce : ♀ / ♃

The transit moon phases (each individual moon phase) are valid for one week, the tertiary lunar phases are about 3.5 months and the secondary lunar phase for about 3.5 years.

The secondary lunar phase has a time window of approx. 3.5 years. When you have found these time windows, you only have to examine three or four solar returns to reduce the windows to one year.

Then with the tertiary progressed lunar phase to 3.5 months, with the lunar return 1 month and with the secondary progression you can reduce the time windows to one day.

As a key we use :

Secondary progression : 1 sidereal day = 1 sidereal year

Tertiary progression : 1 sidereal day = 1 sidereal month

Minor progression : 1 sidereal month = 1 sidereal year

Densmore, Jim

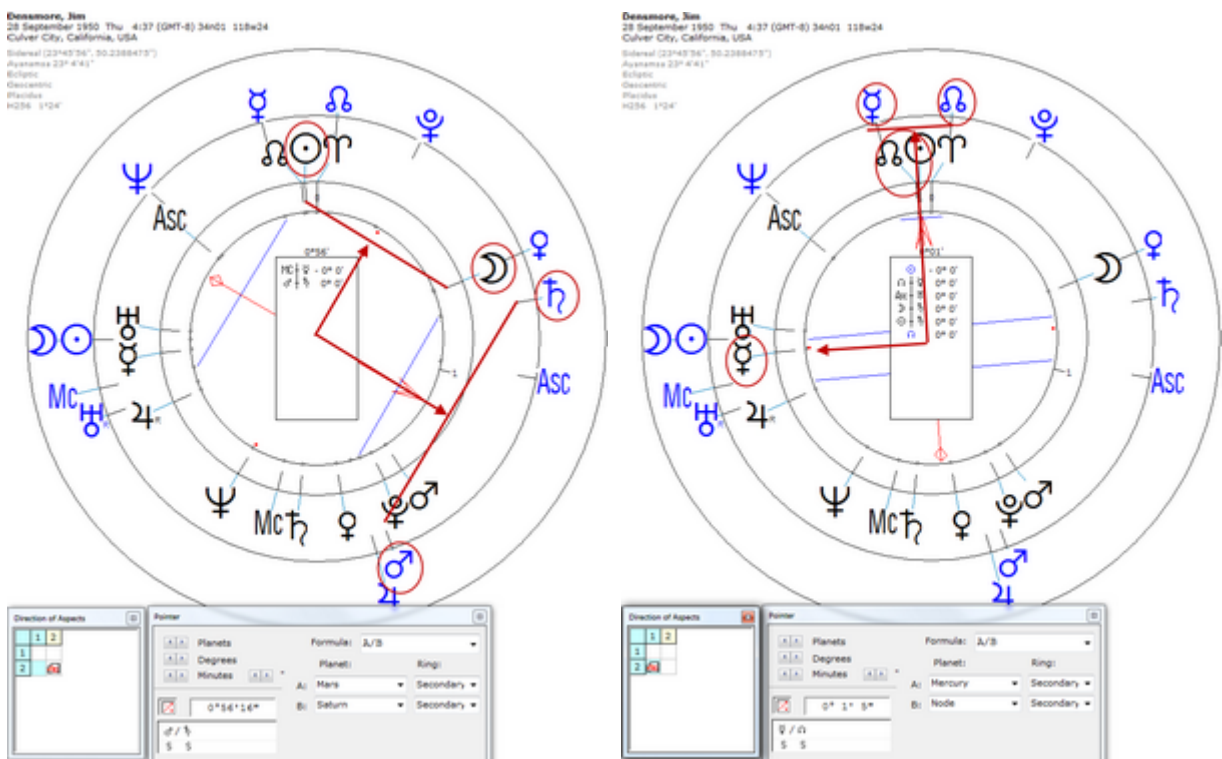

28 September 1950 at 04:37 (= 04:37 AM)Culver City, California, 34n01, 118w24

American musician, the brother of "Doors" drummer John Densmore. A flutist and artist, his career was hampered by episodic stays in mental hospitals. On 4/25/1978, he stabbed himself in the chest while living in a halfway house, Santa Monica, CA.

If you want to specify separation time even more accurately, you can investigate and determine the solar return for the exact year and the lunar return for the exact month. Then you can use the secondary progression to determine the exact day. Of course you can also investigate other events like that.
